

Conservation Reserve Program Acres in Iowa

| | | |
|-------|---------------------------------------|-----------|
| CP1 | Introduced Grasses | 299,889 |
| CP2 | Native Grasses | 147,951 |
| CP3 | Tree Planting | 17,347 |
| CP4 | Wildlife Habitat | 319,523 |
| CP5 | Field Windbreaks | 5,764 |
| CP8 | Grass Waterways | 27,328 |
| CP9 | Shallow Water for Wildlife | 16,986 |
| CP10 | Established Grass | 591,059 |
| CP11 | Established Trees | 7,240 |
| CP12 | Wildlife Food Plots | 5,619 |
| CP15 | Contour Grass Strips | 29,920 |
| CP16 | Shelter Belts | 1,859 |
| CP21 | Filter Strips | 232,224 |
| CP22 | Riparian Buffers | 60,434 |
| CP23 | Wetland Restoration | 30,797 |
| CP25 | Declining Habitat | 40,801 |
| CP27 | FWP Wetland | 14,902 |
| CP28 | FWP Buffer | 38,233 |
| CP29 | Marginal Pastureland Wildlife Habitat | 3,898 |
| Total | | 1,897,239 |

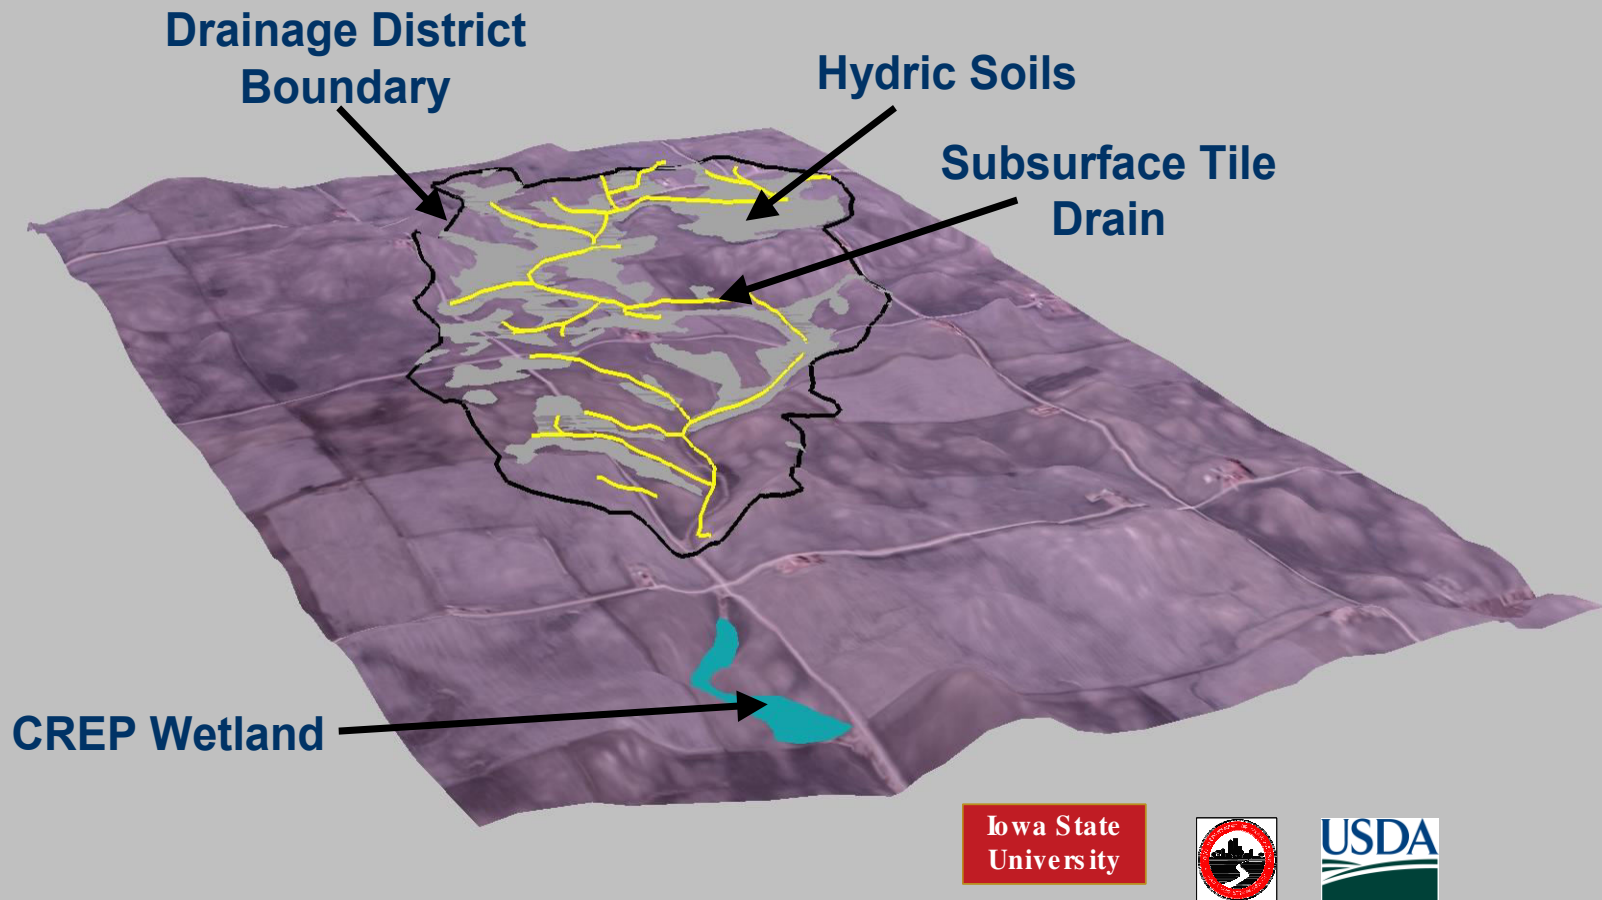

Effects of Tile Drainage on Soil Water

Adapted from: Zucker, L.A. and L.C. Brown (eds.), 1998. Agricultural Drainage: Water Quality Impacts and Subsurface Drainage Studies in the Midwest. Ohio State University Extension Bulletin 871. The Ohio State University.

Iowa Conservation Reserve Enhancement Program

Loss = concentration x carrier

Performance Questions

- **Water Budget**
- **Sediment & Nutrient Budget**
- **Soil Quality Changes**
- **Size/time scales**
- **Wildlife benefits/concerns**

Infiltration/Surface Runoff

- Restored buffer infiltration rates
5X > crop field/pasture.
- 6 m wide grass filters remove
>75% of sediment & > 40% of total N
& P in surface runoff
- Adding 10 m woody buffer to
switchgrass filter removal > 90% of
sediment and > 80% of nutrients
- Switchgrass filters more effective
than cool-season grass filters.

Plant Biomass (kg/ha)

Soil Organic Matter Fractions

Increase > 50% after 7 years

Cool season grass

Tree (Poplar)

Crop (Soybean)

Conceptual Model of Groundwater Flow

- Higher velocities at bottom of aquifer
- Zone of denitrification at water table
- Aquifer type/thickness affects NO_3 transport

Buffer Siting Model

Loam

Till

Sand and Gravel

Limestone

Maximum

Residence Time

Minimum

Maximum

H₂O in contact

Minimum

GOOD

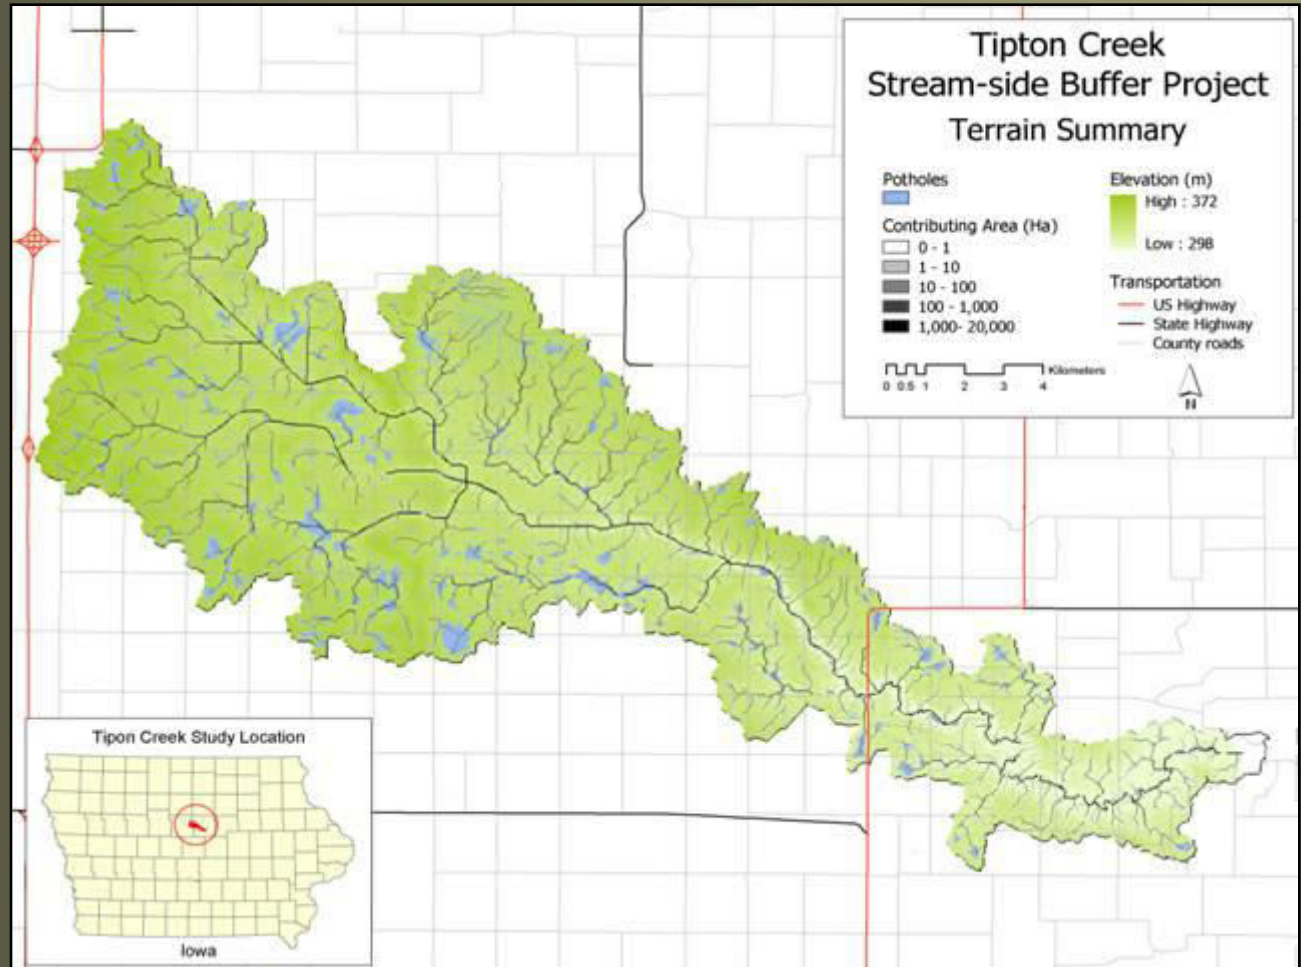

Buffer efficiency
for groundwater

NOT SO
GOOD

Terrain Analysis

Identify and prioritize areas where vegetated buffers and constructed wetlands (CREP) have the greatest potential to improve water quality

Tipton Creek Stream-side Wetness Index
